PROFESSIONAL SUMMARY

Full-stack software developer and recent SAIT graduate who ships working software across web and mobile. I build in TypeScript, React, React Native, Node.js, Python and SQL, and I have delivered a cloud microservices platform on Microsoft Azure and built and shipped Pulse, an AI-coached food and training app now in beta on Google Play. I write tested, maintainable code, design AI features so the product still works when the model does not, and use AI-assisted development tools daily. Three years in client-facing marketing operations taught me to turn business needs into working systems.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, Java, SQL, HTML, CSS
Frameworks: React, Next.js, React Native, Expo, Node.js, Express, Vite, Tailwind CSS
Data & Services: PostgreSQL, Supabase (auth, row level security, storage), Azure SQL, Azure Blob Storage, Firebase, Stripe, Resend
Cloud & Tools: Microsoft Azure (Container Apps), Vercel, EAS Build, Git, GitHub, CI/CD, Jira, Vitest, Supertest, Playwright
AI: LLM features with human approval and safe fallbacks, prompt design; GitHub Copilot, Cursor, Claude, ChatGPT

PROFESSIONAL EXPERIENCE

Full Stack Developer & Project Manager | GBTAC, Calgary, AB 2026
Stack: TypeScript, React, Vite, Node.js, Express, Azure (SQL, Blob Storage, Container Apps), Vitest, Supertest, Playwright, CI/CD

- Led a 4-person Agile team delivering a public research platform, planning and tracking 150+ tasks across four sprints in Jira and owning the programming plan and testing strategy.
- Built both ends of a TypeScript microservices application (8 services plus an API gateway) on Microsoft Azure: a React and Vite front-end and Node.js and Express services backed by Azure SQL, Blob Storage and Container Apps.
- Led AI integration with a backend teammate, and built an ingestion pipeline that cleaned, normalized and loaded the Retrofit Canada dataset to power a choropleth map, EUI comparison charts and province-level analytics.
- Met sub-3-second load and sub-500ms filter targets, backed by a three-tier test suite (Vitest, Supertest, Playwright) and CI/CD for build, test and deploy.

Marketing Manager | Change Your Results Inc., Calgary, AB 2021 to 2024

- Architected marketing automation systems integrating CRM, email and scheduling tools, and built multi-channel lead intake funnels with conditional logic and automated routing.
- Rebuilt client onboarding workflows to shorten time-to-activation, and partnered with senior leadership to align technical workflows with business growth targets.

PROJECTS

Pulse | Android beta on Google Play | pulse.rkmediacompany.com 2026
Stack: Expo, React Native, TypeScript, Expo Router, Supabase (Postgres, row level security), React Query, Vitest

- Built and shipped a food and training app in open Android beta: barcode food logging, workout and water tracking, personalized calorie and protein plans, and watch and scale sync via HealthKit and Health Connect.
- Added Coach, an AI assistant that reads the user's real logs and proposes plan changes that only apply after the user approves, with tiered daily message limits under a C$9.99 a month Pulse Plus subscription.
- Designed the Supabase schema with row level security, plus database functions that rank group challenges without returning anyone's raw logs, and wrote a unit-tested TypeScript plan engine.
- Routed every screen through a single repository interface with Supabase and on-device implementations, which powers a no-keys demo mode and keeps the backend swappable; added Google and Apple sign-in.

EDUCATION & DEVELOPMENT

Diploma in Software Development | SAIT, Calgary, AB May 2025 to August 2026
Relevant coursework: web development, object-oriented programming, database design, software engineering and agile development.

IBM Bob Developer Day, hands-on event on agentic AI coding tools | Calgary, AB July 2026
